InnoVET – An Innovative Modular Dual System Based on Business Processes Modeling and Simulation for Company Oriented Vocational Education and Training

Greece is one of the EU Member States with an extremely high youth unemployment rate (45.5%). Youth unemployment in Romania (19.9%) is above the EU average of 18.7% (Statista 2017).

Vocational education and training has an image problem in these countries. This project seeks to increase the appreciation of this career option among young people.

InnoVET relies on core elements of the German VET system, which is used as a good practice model to provide a research-based starting point for discussions on transfer processes in the two pilot regions.

InnoVET supports two pilot regions in Greece and Romania with the networking of stakeholders and adaptation of key elements of the dual VET system.

Project partner EMaTTech is developing a business simulation tool that will enable SMEs to simulate work processes with different human and structural resources and to check their success. f-bb is advising stakeholders in Kavala, Greece and Călărași, Romania and providing specialist support for the project.

Co-funded by the
Erasmus+ Programme
of the European Union

The project is funded by the State Scholarships Foundation Greece of the Erasmus+ Programme
